

Supplemental Tables

Regression Coefficients: Independent Variables

Independent Variables: (First-year students)

selectivity - Barron's 2001 admissions selectivity (1 to 6 – recoded so that higher is more selective)

sector (private=1, public=0)

enrollment (undergraduate, in thousands)

urbanicity (from IPEDS, large city is the reference category)

- rural
- small town
- large town
- fringe1 (fringe of mid-size city)
- mid-size (city)
- fringe2 (fringe of large city)

2000 Carnegie Classification (Master's institutions are the reference classification)

- Extensive (Doctoral/Research Universities)
- Intensive (Doctoral/Research Universities)
- Liberal Arts (BA)
- General (BA)
- Other Carnegie (Classifications greater than 32)

on campus (proportion first-year students who report living on campus or in Greek housing)

female (proportion female first-year students from IPEDS)

full-time (proportion full-time first-year students from IPEDS)

age (mean for first-year students)

major field (proportion of first-year students who self-report each; social sciences is the reference category)

- humanities
- math
- preprofessional
- multiple (fields)

race/ethnicity (proportion of first-year students from IPEDS; White is the reference category)

- Alien
- Asian
- Black
- Latina/o
- Native American
- Unknown
