^a Response rate (number of respondents divided by sample size) is adjusted for non-deliverable mailing addresses.

^b Oversampled students are included in institution numbers but not in consortium, Carnegie classification, or total NSSE 2003 sample numbers. Consortium, Carnegie classification, and total NSSE 2003 sample numbers include your institution numbers, unlike the means and frequency reports that exclude your institution numbers.

^c Sampling error is an estimate of the margin by which the "true" score for your institution on a given item could differ from the reported score. To interpret the sampling error, assume that 60% of your respondents reply "very often" to a particular item. If the sampling error is $\pm 5\%$, then the true population value is most likely between 55% and 65%.

^d Each number represents the percent of total respondents within the category.
